

COMP 1017

Handing in Your Homework

Labs must be uploaded to the student web server;
a URL must also be submitted through Moodle.

If you get a **403 error** (Forbidden), check to make sure that you have an `index.html` file in the **root** of your uploaded framework folder.

If you get a **404 error** (Page Not Found), check to make sure that:

1. your files transferred properly;
2. there are no typos in your URL.

Do not submit a local file path, such as:

C:/Users/username/Desktop/framework/index.html

Because this points to a file stored on your computer, not a web server, I cannot access it.

Do not copy a path from FileZilla, such as:

`ftp://user@dmitstudent.ca/public_html/demo`

Because this uses FTP, I would need your login credentials in order to see it.

Assignments must be zipped up (compressed) and submitted through Moodle.

To create a .zip file on **Windows**:

1. Find your framework folder in File Explorer.
2. Right click on the folder and choose:

Send To > Compressed (zipped) folder

To create a .zip file on macOS:

1. Navigate to your framework folder in Finder.
2. Right click on the folder and select **Compress**.

Do not submit anything other than a .zip file.

This includes .rar, .tar, or .7z files.

Do not include files that are not needed for your website to function properly, such as:

- Photoshop files
- marking rubrics
- assignment instructions
